

Inverse chi distribution

The inverse chi distribution is a continuous probability distribution of a positive-valued random variable, which is the reciprocal of a variable distributed according to the chi distribution.

$$a := \text{curve2d}(\text{chiinv}(y, 1), y, 0, 0.99, 20)$$

$$b := \text{curve2d}(\text{chiinv}(y, 2), y, 0, 0.99, 20)$$

$$c := \text{curve2d}(\text{chiinv}(y, 3), y, 0, 0.99, 20)$$

$$d := \text{curve2d}(\text{chiinv}(y, 4), y, 0, 0.99, 20)$$

$$e := \text{curve2d}(\text{chiinv}(y, 5), y, 0, 0.99, 20)$$

Name	Title	Color	Origin
a	k = 1	-----	
b	k = 2	-----	
c	k = 3	-----	
d	k = 4	-----	
e	k = 5	-----
