

Pi Calculation Parallel Processing

Calculus II

This is one of the parallel processing files. Calculus I and Calculus II are files which do mathematical calculations of Pi - TT in parallel, therefore we get the results of Pi - TT twice as fast. The file which collects results from the Calculus I and Calculus II and sets up variables between the files is the Parallel processing master.

```
calcPi(npoints)
{
  1 circlePoints := 0
  for(i := 0 , i < npoints , i += 1)
  {
    1 xcord := randnum(-1 , 1)
    2 ycord := randnum(-1 , 1)
    2 if(xcord2 + ycord2 <= 1)
    3 {
      1 circlePoints += 1
    }
  }
  3 return(circlePoints)
}
```

a := 0
a = 2000

Import number of points from the main document

x2 := calcPi(a)
x2 = 1584

Export number of
points in the circle to
Channel
