

```

# Python program to create table in mysql database

import mysql.connector as SQLCON

# Definition of the function NewTable
# When we make a call of function NewTable() it will create a new
table 'Software'
def NewTable():

    # Connecting to the server
    conn = SQLCON.connect(user = 'test_user',
                          password = 'Test123',
                          host = 'localhost',
                          database= 'matdeck')

    # Preparing a cursor object
    cursorObj=conn.cursor()

    # Creating table Software which contains two columns
    # Name and Number of data types varchar for string storing and
    # of integer data type
    cursorObj.execute("CREATE TABLE Software (Name VARCHAR(255),
    Number int);")
    print("Software Table is Created")
    return()

# Calling NewTable() function
NewTable()

```
